

Lab-5

CN-Lab Experiment 2.

configuring web server and DNS

Observations.

- * A topology was created using a switch, a server and a PC connected as shown in the figure.

- * HTTP services of the server was switched on
- * DNS service of the server was configured
- * Typing the defined url in the web browser of PC gives the required result

Learning Outcomes.

- * creating a topology with switch, server and PC
- * using HTTP services
- * configuring the web server
- * configuring DNS services so that we can use the name instead of ip address
- * using the name instead of the ip address in the web browser of PC gives the required result.
